NEWS RELEASE

ILLIANA TECHNICIANS COMPLETE AMS 2750D TRAINING

Paul Grolla and Ron Quilici completed a two-day training course that covered Aerospace Material Specification AMS 2750D. This course was designed to “improve the understanding of pyrometry and the performance of pyrometric functions. It provides guidance and interpretations of AMS 2750D as well as fundamental pyrometry principles and tells you what a Nadcap auditor will expect to see during an audit.”

All attendees in the 25 person class except Ron and Paul were Nadcap approved heat treaters doing work in the aerospace industry. Paul commented “this afforded us an excellent opportunity to learn not only from our instructor who is a Nadcap auditor with 45 years of heat treat experience, but from a knowledgeable group of premiere heat treaters that are all currently Nadcap approved.”

Illiana is currently providing calibration services including temperature uniformity surveys to Nadcap approved aerospace suppliers. Our procedures and documentation has successfully passed Nadcap audits.

While Ron and Paul both have over 30 years of calibration experience in the heat treat area, we feel this training has been a great benefit to our technicians and has strengthened their AMS 2750D knowledge.

Please feel free to contact Illiana to learn how we can help your company become AMS 2750D compliant and/or Nadcap approved.
